

Pond Waterproofing - The Sukhothai Hotel, Bangkok

Substantial water loss and the possibility of foundation damage prompted the Sukhothai Hotel to repair the 2,700m² central “pond” within the quadrangle of the main accommodation block.

Upon removal of the existing sheet membrane system Hammersmith installed a full base drainage system, fully consolidated the base with new aggregate and re-screeded the entire pond area with 100mm of new concrete.

A liquid applied reinforced waterproofing membrane system was then applied to the entire newly concreted area.

All works were carried out whilst the hotel was fully occupied without inconvenience or hindrance to hotel guests or residents.
