

# PROJECT REFERENCE

## Demolition of Header Tank Base Chachensao

Due to a combination of structural engineering concerns related to the quality of the original construction and programme limitations, Hammersmith proposed the only practical solution when construction of this 45m high header tank re-commenced - The controlled Demolition of the old structure down to base level by Diamond Wire and Wall sawing.

Hammersmith were able to respond quickly and efficiently and complete the total demolition within the allotted 21 day program.
