

Service Conduit Installation – Benja Hotel, Sukhumvit Soi 5

Pipe ramming is an extremely cost effective alternative for the placing of steel casings and pipes under roads, railways, existing structures and landscaped areas.

Ramming cuts excavating, set-up and equipment costs, avoids road closures and allows installations in a wide range of soil conditions whilst cutting down on structural and environmental damage.

Hammersmith installed Three 12” and one 8” pipe over two consecutive nights in the very busy and congested Sukhumvit Soi 5 to allow service connection between adjacent hotel buildings
