

Inter-Floor Connecting Stairs - California Fitness

The Clients requirement for an interconnecting stair between adjacent floors demanded the careful and controlled removal of approximately 10m² (app. 7.5 tones) of post tensioned structural floor slab.

The combination of surface scanning, investigative core drilling and floor sawing allowed controlled demolition of the floor without undermining the structural integrity of the slab

“Surgical” removal of structural concrete allows Architects and Designers to install direct stair links between floors and create open areas in floor slabs, greatly enhancing the “usability” of available office space.
