

PROJECT REFERENCE

FULLY BONDED, INSULATED, HOT WELDED PVC MEMBRANE - KELLOGG SPR

The potential consequences of rain water contaminating food lines resulted in the immediate shut down of production should the slightest hint of water leakage be suspected at this Snack Plant facility

To finally solve this problem some 6,000m² of specially made, profiled EPS insulation was fully bonded to the existing roof sandwich panels and a 1.2mm fleece backed Sarnafil PVC membrane fully bonded to the insulation. All joints were taped with thermally welded sealing strips and an internationally certified fall arrest system installed
