PROJECT REFERENCE

STEEL TRUSS BEAM STRENGTHENING - KELLOG RTEC PLANT, RAYONG

A system of steel plate bonding to strengthen existing roof trusses was installed by Hammersmith to allow for the continuation of roof waterproofing works essential for the on going production at this ready to eat cereal (RTEC) plant.

The over loaded roof structure required extensive strengthening works, purlin replacement and the installation of a new main pipe rack structure to allow the release of hanging service ducts etc., from roof members.

All works were carried out in a continuous 20 day shut down under the strictest of quality food safety protocols.
